

DILUTION CONTROL

FUSION PRO UNIT

FUSION PRO

Our latest addition to the dilution control grouping, the Fusion Pro packs a lot of dispensing into a compact new design; the dial controls have been enlarged and each locking storage cabinet accepts either one 5-liter or two 2-liter concentrates and each can be configured to fill both bottles and buckets if needed.

Please speak to your Genesan Representative to discuss your specific needs.

DILUTION CONTROL OPTIONS

POD DUAL-FLOW TRIGGER

Designed for those locations where on-the-wall units are not practical. The Dual Flow Trigger mounts directly on 2L POD concentrates. Once attached to a water source, it can be set to fill both bottles or buckets. Twist-on foaming attachment available.

EXTREME UNITS

SQUEEZE & POUR BOTTLE

Reservoir

A convenient option when wall-mounted dispensing is not preferred.

Loosen cap, gently squeeze bottle to fill reservoir. Remove cap and empty contents into filled bottle or bucket.

Our Extreme 1-Button unit is ideal for filling autoscrubbers when only a single product is needed.
